

Junckers Sports Flooring

Exclusively distributed and installed by
FILTRA Timber in the Philippines

Why is Junckers better?

- ✓ Eliminates all the things that usually can go wrong
- ✓ Easy and very fast to install. Big component plank sizes
- ✓ Top quality lacquering from factory –no need for sanding and lacquering.
- ✓ Can be used immediately after installation.
- ✓ Certified for all major indoor sports.
- ✓ 5 years warranty
- ✓ Available in stock in the Philippines

Exclusively distributed and installed by
FILTRA Timber in the Philippines

Junckers is World-Class

- ✓ Junckers Sports Flooring Solutions are tested and approved according to European Norm EN14904 which is followed by the Sports Federations.
- ✓ Our solutions are approved by Basketball(FIBA), Handball(IHF), Badminton(BWF) and Squash(WSF) , UEFA(LNFS) being the most important adhered to approvals in the market.
- ✓ Junckers is Europe's leading manufacturer of solid hardwood sports, dance and activity floor systems.
- ✓ FSC and PEFC Certified
- ✓ Our references are numerous spreading World-Wide.
- ✓ We have supplied our solutions to Olympic Games, International competitions, single-and multi-purpose halls in Schools, Stadiums, Sports Clubs for Volleyball, Basket, Futsal, Dance, Fitness, Gyms, and etc.

What is "Press Drying"?

What is Press Drying?

Press drying is a method that can be used for drying certain hardwoods. The process involves drying the wet staves under pressure in a large heated press for about two hours at 170°C

Junckerssolid Beech and European Maple floors are all press dried.

JUNCKERS

The hardness of a wood is rated on an industry wide standard known as the Janka Test. The Jankatest measures the force required to embed a .444 inch steel ball into the wood by half its diameter. This test is one of the best measures of the ability of a wood specie to withstand denting and wear.

UNOBAT 78+

UNOBAT 45

PRO COMPLETE 44

UNOBAT 78+

1. 22 x 129 x 3700 mm floorboards
2. Batten: 27 x 60 x 3360 mm with pre-attached shock pads
3. UnoBat 78+ wedge including shockpad
4. 0.2 mm SylvaThene moisture barrier
5. Combi sports skirting

The Unobat 62+ System provides excellent performance and safety, along with the ability to accommodate all types of irregular subfloors. The 22 mm solid hardwood floorboards are fastened to a subfloor system consisting of single layer engineered battens with pre- attached shock absorbing rubber pads.

The pre-attached rubber pads snap-lock into either a J-lock cradle, or if the floor needs to be levelled, a J-Lock adjustable wedge. The J-Lock cradle serves as a durable stop block for flat subfloors.

The J-Lock adjustable wedge allows for the quick correction of uneven subfloors into flat, ideal playing surfaces. Levelling the floor is conducted without use of nails and tools, wedge can increase the height of the floor system as needed.

FACTS

Construction height using the J-Lock cradle for flat sub floors	78 mm
Construction height using the adjustable J-Lock wedge and supporting blocks	From 78 mm to 205 mm
Required subfloor	Even or uneven
Performance	Area-elastic according to EN 14904 class A4
Floorboard type	Prefinished 22 mm 2-strip solid hardwood
Subconstruction	Single layer batten system
Batten Centre C/C	Choice between 336 mm or 411 mm
Junckers' 25 years fatigue test	✓
Sanding and re-sealing	Yes, to bare wood 8-10 times
Suitable for underfloor heating	Yes

UNOBAT 78+ Installation

UNOBAT 45

1. 22 x 129 x 3700 mm floorboards
2. Batten: 23 x 45 x 3600 mm, foam strips included
3. 0.2 mm SylvaThene moisture barrier
4. Combi sports skirting

The Unobat 45 System is a low-profile, high-performance batten based system. It is designed for use over flat subfloors.

The 22 mm solid hardwood floorboards are fastened to a resilient subfloor system consisting of single layer engineered battens with pre-attached neoprene shock absorbing strips.

The shock absorbing strips are inset into a “U” shaped channel on the underside of the batten. This design creates a built-in stop block, ensuring the long-term resilience of the system.

FACTS

Construction height	45 mm
Required subfloor	Flat
Performance	Area-elastic according to EN 14904 class A4
Floorboard type	Prefinished 22 mm 2-strip solid hardwood
Subconstruction	Single layer batten system
Batten Centre C/C	Choice between 336 mm or 411 mm
Junckers' 25 years fatigue test	✓
Sanding and re-sealing	Yes, to bare wood 8-10 times
Suitable for underfloor heating	Yes

UNOBAT 45 Installation

PRO COMPLETE 44

- 1. Floor panels:**
 - Full size panel: 517.5 x 1800 mm
 - Half size panel: 517.5 x 900 mm
- 2. Prefixed battens:**
 - 18 x 70 mm engineered birch battens
- 3. Black painted transition ramp**

The Pro Complete 44 Portable Sports Floor comprises of 22 mm solid hardwood floorboards preassembled into lightweight, easy to handle panels.

Underneath each floor panel several prefixed birch battens are mounted together with a soft polyurethane foam to provide correct shock absorption and resilience.

The floor panels are easily locked into position by means of factory-fitted metal brackets. Lengthwise the panels have a tongue and groove connection and at ends the panels are joined using loose tongues.

Pro Complete 44 tolerates larger fluctuations in relative humidity and is therefore suitable for long term use.

FACTS

Construction height	45 mm
Required subfloor	Flat

FLOOR SAFETY AND PERFORMANCE

Friction

Correct friction is important when ball players move rapidly on the floor, and the ideal friction rating is between 80 and 110. A friction value less than 80 makes the floor too smooth, and above 110 makes the floor too rough.

Rolling load

The floor's ability to withstand rolling loads is important for example where trolleys and retractable seating are used. Test results display whether the floor can withstand a rolling load of 1,500 N (approx. 150 kgs).

Vertical deformation

The floor's ability to absorb shock depends on its ability to flex when exposed to a dynamic load. Test results display the floor's vertical deformation in mm when exposed to a dynamic impact equivalent to that of light jogging.

Shock absorption

A shock absorbing floor minimises the risk of injuries. Testing measures the percentage of impact energy absorbed by the floor when landing a jump.

Ball bounce

A good ball bounce increases the ball control and the speed of the game. Test results display the rebound achieved by the floor as a percentage of the rebound measured on a concrete floor.
